Business Requirements Document: Checkout & Payments

Product: Leafcart Grocery App (fictional) · Version 1.2 · Status: Approved for build

1. Purpose

This document describes the business requirements for the redesigned checkout journey of the Leafcart grocery app on web and mobile. It is the baseline for design, development and testing.

2. Scope

In scope: cart review, delivery slot selection, promo codes, payment, order confirmation and order cancellation. Out of scope: product search, loyalty points and the warehouse picking system.

3. Functional Requirements

ID	Requirement	Description	Priority
FR-01	Cart minimum	The customer cannot proceed to checkout if the cart subtotal is below INR 199. The Checkout button is disabled and the message 'Add items worth INR X more to checkout' is shown, where X is the shortfall.	High
FR-02	Cart quantity limits	Each product line allows a quantity from 1 to 10. Setting quantity to 0 removes the line after confirmation.	Medium
FR-03	Delivery slot selection	The customer must choose a delivery slot before payment. Slots are shown for the next 3 days in 2-hour windows between 07:00 and 21:00. Slots that are full or start within 90 minutes are greyed out and cannot be selected.	High
FR-04	Delivery fee	Orders with a subtotal of INR 499 or more get free delivery. Orders below INR 499 are charged a delivery fee of INR 35.	High
FR-05	Promo codes	The customer can apply one promo code per order. Codes are 6 to 12 alphanumeric characters and are not case sensitive. An invalid or expired code shows 'This code is not valid'. The discount cannot exceed 50% of the subtotal.	Medium
FR-06	Payment methods	Supported payment methods are UPI, credit/debit card and cash on delivery. Cash on delivery is only available for orders up to INR 2,000.	High
FR-07	Payment failure	If a payment fails, the order is not placed, the cart is kept unchanged and the customer can retry. After 3 failed attempts within 15 minutes, card payment is blocked for that order for 30 minutes.	High
FR-08	Order confirmation	On successful payment the customer sees an order number in the format LC-YYYYMMDD-NNNNN and receives an SMS and email confirmation within 2 minutes.	High
FR-09	Order cancellation	The customer can cancel an order free of charge until 60 minutes before the start of the delivery slot. Refunds for prepaid orders are initiated to the original payment method within 24 hours.	Medium

4. Non-Functional Requirements

ID	Requirement	Description	Priority
NFR-01	Performance	The checkout page loads within 2 seconds at the 95th percentile with up to 5,000 concurrent users.	High
NFR-02	Security	Card details are never stored by Leafcart; card entry uses the gateway's hosted fields. All checkout traffic uses TLS 1.2 or higher.	High
NFR-03	Session timeout	An idle checkout session expires after 15 minutes. The cart is preserved, but the selected slot is released.	Medium
NFR-04	Accessibility	All checkout screens meet WCAG 2.1 level AA, including keyboard navigation and screen-reader labels for every form field.	Medium

5. Assumptions

The payment gateway provides a sandbox environment for testing. Delivery slots are supplied by the existing Slot Service API. All prices are in INR and include GST.
